BAC clone 10D6 (strain OR74A) is available at the Fungal Genetic
Stock Center, http://www.fgsc.net
Sequencing was performed by MWG Biotech AG, Ebersberg, Germany,
http://www.mwgdna.com
Information on performance of analysis and a more detailed
annotation of this entry and other sequences can be viewed at:

The encoded xylanase, and xylanases derived from Humicola, Thermoascus, Chaetomium, Mucor, Talaromyces, Malbranchea, Myceliophthora, Thielavia, Byssochlamus or Paecilomyces strains can be used in the monocomponent xylanase preparations of the invention. The xylanase preparations and the recombinant Thermomyces xylanase are useful as animal feed additives, which promote in-vivo breakdown of plant cell wall material and thus improve digestibility, growth rate and/or feed conversion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            181

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                  The sequence encodes an endo-1,4-beta-D-xylanase from Thermomyces lanuginosus (Humicola lanuginosa), which may be used as a bread-improving additive. The enzyme may be expressed recombinantly from a plasmid pyES2.0 vector in Saccharomyces cerevisiae DSM 10133 (claimed), and may be added to flour at 5-5,000 (preferably 20-2,000) FXU/kg flour, optionally along with other enzymes (amylase, maltogenase, lipase, cellulase, hemicellulase, pentosanase, glucose-oxidase, laccase, protease and/or peroxidase). The enzyme combines particularly well with amylolytic enzymes, and may be used to improve baking properties of flour and/or dough, by increasing volume and improving texture, flavour, crumb softness, freshness and anti-staling properties, while improving dough machinability and stability. (Updated on 16-OCT-2003 to standardise OS field)

                                                                       밁
                                                                                                    5
                                                                                                                                            밁
                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                 The invention relates to a variant xylanase polypeptide (I) or its CC fragment having xylanase activity, comprising one or more amino acid modifications such that (I) or its fragment has an altered sensitivity to CC a xylanase inhibitor as compared with the parent xylanase enzyme. (I) or CC its coding sequence (II) is useful for degrading or modifying plant cell CC wall or for processing a plant material by contacting the plant cell wall CC or plant material with (I) or (II). (I) is useful for modifying plant CC materials, and in baking, processing cereals, starch production, processing wood and enhancing the bleaching of wood pulp. (I) is useful CC for altering the viscosity derived from the presence of hemicellulose or crabinoxylan in a solution or system comprising plant cell wall material. CC (I) is useful for preparing a foodstuff such as bread, pretzels, cortillas, cakes, cookies, biscuits or crackers. The present sequence correseents the coding sequence of Thermomyces lanuginosus xylanase A as CC described in the method of the invention
                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 В
The invention relates to a Pichia cell comprising at least one copy of heterologous nucleotide sequence encoding a polypeptide of interest, where the codon usage of the sequence has been adjusted to match the preferred codon usage of P. methanolica. The invention also relates to a method for producing high yields of heterologous codon optimised polypeptide in a Pichia cell. The Pichia cell is useful for producing a polypeptide of interest, where the polypeptide is encoded by a nucleotide sequence heterologous to P. methanolica. The present sequence is Thermomyces lanuginosus codon optimised xylanase gene which is the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAD17927

This plasmid and pJaL77 (imparting hygromycin B resistance) were used to transform protoplasts of A. foetidus NO953. The xylanase yield was 0.12 g/l. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 27-AUG-2003)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Aspergillus foetidus cells expressing heterologous enzyme - partic. fungal lipase or xylanase, provide high yields without significant of protease or mycotoxin.

Novel isolated Aspergillus fumigatus industries such as those involved in beverages, textiles and detergents. industries polypeptide, the making o in various and feed,

Page 163-64; 169pp; English.

The sequences given in ABQ80319-66 encode enzymatic proteins derived from CC A. fumigatus. The resulting proteins display the catalytic activity of an CC enzyme such as tannase, cellulase, glucose oxidase, glucosanylase, physiase, beta-galactosidases, invertase, lipase, alpha-amylase, laccase, polygalacturonase or xylanase. Compositions comprising the tannase are composition for modulating the amount of compounds that comprise a gallate seter linkage in a composition. Compositions comprising the compositions comprising the composition composition. Composition composition composition comprising the amount of composition. Compositions comprising the amount of for modulating the amount of myo-inositol phosphaces of majorate are useful for modulating the amount of for modulating the amount of myo-inositol phosphaces of modulating the amount of myo-inositol phosphaces or modulating the amount of myo-inosition. Compositions comprising lapae are useful for modulating the amount of compositions comprising the amount of myo-inositions comprising comprising alpha-amylases are useful for modulating the amount of oxidated phenolic compositions or maltodextrins in a composition. Compositions comprising comprising physalacturonases or useful for modulating the amount of oxidated phenolic compositions comprising polygalacturonases are useful for modulating the amount of oxidated phenolic compositions comprising polygalacturonases are useful for modulating the amount of oxidated phenolic compositions comprising polygalacturonases of a season and compositions comprising polygalacturonases of a composition compositions comprising polygalacturonases of a composition compositions comprising polygalacturonases of compositions comprising polygalacturonases of compositions compr

Claim 2; Page 165-66; 169pp; English

Comprising sucrase or invertage are useful for modulating the amount of glyceride in a composition. Compositions comprising lipase are useful for comprising lipase are useful for modulating the amount of glyceride in a composition. Compositions of CC starches or maltodextrins in a composition. Compositions comprising CC laccase are useful for modulating the amount of oxidated phenolic care useful for modulating the amount of oxidated phenolic compounds in a composition. Composition comprising polygalacturonases CC are useful for modulating the amount of ingh or low molecular weight CC polygalacturonic acid chains in a composition. Compositions comprising CC xylanases are useful for modulating the amount of xylan or xylo-oligomers CC in a composition. The A. fumigatus proteins and corresponding DNA's are useful in various industries such as those involved in the making of food CC and feed, beverages, textiles and detergents. The DNA's are useful to express recombinant enzymes for characterization, modification or CC express recombinant enzymes for characterization, modification or to identify duplicated genes of paralogs having the same or similar CC biochemical activity and/or function, to compare with nucleic acid construction, to compare with nucleic acid construction, and to raise anti-protein antibodies. The polypeptide having CC tannase activity increases the yield of tea liquor from tea leaves, and to raise anti-protein antibodies. The polypeptide having CC improves the colour, flavour and health benefits of tea products, particularly an instant tea product. The polypeptide having cellulase activity enhances cleaning ability of detergent compositions useful for modulating the amount of compounds that comprise a year ester linkage in a composition. Compositions comprising cellulase are useful for modulating the amount of cellulose in a composition. Compositions comprising glucose oxidase are useful for modulating the amount of glucose or oxygen in a composition. Compositions comprising phytase are useful for modulating the amount of myo-inositol phosphates in a composition. Compositions comprising beta-galactosidases are useful for modulating the amount of lactose in a composition. Compositions comprising sucrase or invertase are useful for modulating the amount of compositions comprising the amount of lactose in a composition. polygalacturonase or xylanase. Compositions comprising the tannas useful for modulating the amount of compounds that comprise a call useful for modulating the amount of compounds that comprise a call useful for modulating the description. fumigatus. sequences given umigatus. The re ences given in ABQ80319-66 encode enzymatic proteins atus. The resulting proteins display the catalytic actus. The resulting proteins display the catalytic actus as tannase, cellulase, glucose oxidase, glucoamy beta-galactosidases, invertase, lipase, alpha-amylas the tannase are prise a gallate g cellulase are ns derived from activity of an laccase,

01-FEB-2000
This sequence corresponds to a degenerate sequence encoding a precursor from Streptomyces olivaceoviridis. The sequence can into the plasmid pQE60 to generate plasmid FERM P-16713 for every. E.coli. The xylanase is useful for the preparation of xyl

The sequence can be insert into the plasmid pQE60 to generate plasmid FERM P-16713 for expression e.g. E.coli. The xylanase is useful for the preparation of xylooligosaccharide from xylan and for pulp-bleaching. (Updated on 27-AUG-2003 to correct OS field.)

The xylan enzyme has good heat stability, high activity under acidic and neutral pH. The xylan enzyme can be used as a feed additive and can be widely used in animal feed.
                                                                                                                                                                                                                                                                                                                   Sequence

Fragments of the (hemi) cellulase DNA are useful as probes and primers for detecting the expression of (hemi) cellulose mRNA in a biological sample such as a tissue. They are C also useful as query sequences to identified other family members or related sequences. Anti-(hemi) cellulase antibodies are useful for Qualitative or quantitative determination of a polypeptide in a C biological sample. These antibodies are also useful in diagnosing corganism is infected with Aspergillus. The dough prepared by using the inventive (hemi) cellulase has increased strength, elasticity, stability, reduced stickiness, improved extensibility and machinability. The prepared baked product has improved crumb structure, softness and flavour. The (hemi) cellulase has higher specificity towards the substrate, is less antigenic and produces less undesirable side
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Similarity
